Rubber grid floor mats

Rubber grid floor mats by Seintex feature a simple eye-catching pattern that looks attractive and blends perfectly with the interior of any car. The easy-to-wash pattern prevents water from flowing around while driving and prevents spills when removing the mat.

High-quality materials with 40% artificial rubber guarantee excellent wear resistance, elasticity and strength. To prevent natural rubber aging process, the floor mats include an advanced set of additives. The use of high quality, expensive imported components additionally results in our floor mats and other products being virtually odorless.

Advantages

- High-quality materials
- Taller edges compared to competing products
- Superior resistance to wear
- Quick return to shape due to high elasticity
- Perfect fit for the interior outlines
- Grid pattern traps water and dirt

Raised-edge floor mats

We offer Seintex floor mats for Russian cars with raised edges of 3.5 cm, made of 100% rubber.

This material has obvious advantages: rubber is resistant to wear during the entire useful life of the product and remains flexible even in sub-zero temperatures. As a special feature, our rubber floor mats have anti-slip spikes on the reverse side, holding the mats in place and preventing them from jamming the pedals.

All driver's side mats have extra padded area under the driver's feet to protect against excess wear and deformation in the course of normal use.

Advantages

- High wear resistance with extra padding under the driver's feet
- Perfect fit
- Raised edges trap water and dirt, keeping your car interior clean
- Extra safety with non-slip spikes on the back of the floor mats

LUX tufted floor mats

Seintex lineup of products would not be complete without LUX tufted floor mats with rubber base. Textile floor mats are produced primarily for business class cars. Thanks to rich black color and premium texture, they blend perfectly with the most expensive car interior. The main difference between Seintex mats and other similar products is non-slip and moisture-proof rubber foundation. An additional padding under the driver's feet helps extend useful life of the entire floor mat set, while non-slip spikes on the underside prevent the mats from shifting while driving. The mats are trimmed with heavy-duty band around the edges. LUX tufted floor mats by Seintex have original fittings matching the original fastenings of the car. This allows the mats to be securely attached to the cabin floor for safer driving.

Advantages

- Premium look
- Perfect fit
- Extra safety with non-slip coating on the underside
- High wear resistance with rubber mat base

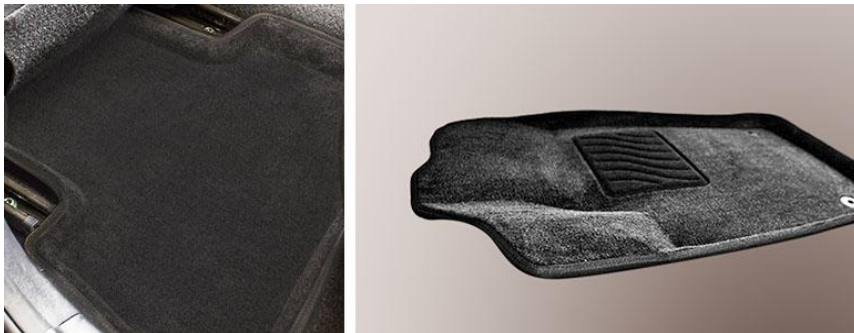

3D tufted floor mats

Car owners love 3D floor mats for their attractive appearance, unique combination of textile coating and 3D replication of the car floor. SeiNtex 3D tufted floor mats feature triple-layer design: foam base with tufted upper layer and non-slip coating on the underside. To improve durability, the driver's floor mat features plastic padding under the driver's heels.

These mats are easy to wash. They are manufactured at our own production facilities in Russia. Compared to Chinese counterparts, the mats perfectly adjust themselves to the car interior outlines.

Advantages

- High-quality materials
- Perfect fit
- Premium appearance
- Great wear resistance with rubber base
- Safety with non-slip spikes on the underside of the mat

Cargo mats

Seintex cargo mats are made of imported polymer material with the elasticity of natural rubber.

This solution extends the useful life of mats and maintains their superior quality. All rubber cargo mats are tailor-made for specific car models, so all mats adjust themselves to the trunk outlines to the inch. It is worth a special mention that Seintex cargo mats are less slippery than plastic ones, preventing cargo from shifting in sharp turns.

Advantages

- Reliable trunk protection against damage, dirt, and dust
- High-quality materials
- Perfect fit

Accessories For Commercial Vehicles

We produce rubber grid floor mats and tufted floor mats for trailer truck cabins. What differs them from competing products is the shape that fits the cabin floor perfectly.

Every set of floor mats fits one specific vehicle model. Non-slip spikes on the underside prevent mats from shifting while driving. The driver's side mat is thickened to extend the useful life of the mat set.

Advantages

- High-quality materials
- High wear resistance and durability
- Quick return to shape due to high elasticity
- Perfect fit for the interior outlines
- Clean car interior thanks to mat pattern trapping water and dirt

Mud flaps

Our company produces original mud flaps for certain car models.

Precisely fitting the wheel arch, Seintex mud flaps do not require drilling metal body parts for installation in most cases.

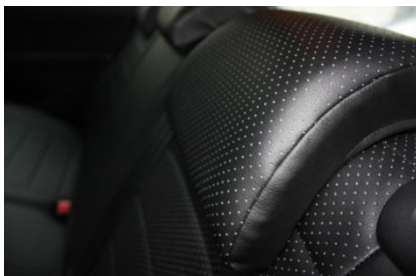

Front mud flaps protect the underside of your car against stones, soil particles, etc.

Rear mud flaps protect cars behind you from dirt, preventing road accidents.

Advantages

- High-quality materials survive temperatures down to -40°C
- Car body protection against mud and soil
- Safety – rear mud flaps protect cars behind you from dirt, preventing road accidents.

Car seat covers

Arigon eco-leather is the most popular material for seat covers today, with the touch and look of genuine leather. The material passes air while repelling moisture, making our seat covers great for hot summer days. Eco-leather makes our seat covers equally suited for winter, as it remains soft at -35°C without cracking.

Another popular product is Jacquard seat covers. Jacquard is a smooth complex-weave fabric.

Jacquard seat covers are highly practical – they are easily cleaned using a vacuum and can be machine-washed at low temperatures. The fabric resists deformation thanks to its complex structure.

Advantages

- Perfect fit to the shape of seats, armrests and headrests
- Side seat support
- Softness and comfort
- Excellent air permeability and moisture ingress prevention
